

# Forwarding Messages to Your Email Account

Using this method, each TIENET message sent to you results in a notification message sent to your regular email account. The notification will not contain the full content of the message. Instead it will contain a link back to TIENET. When you click the link, you will see the full message only after you provide your password.

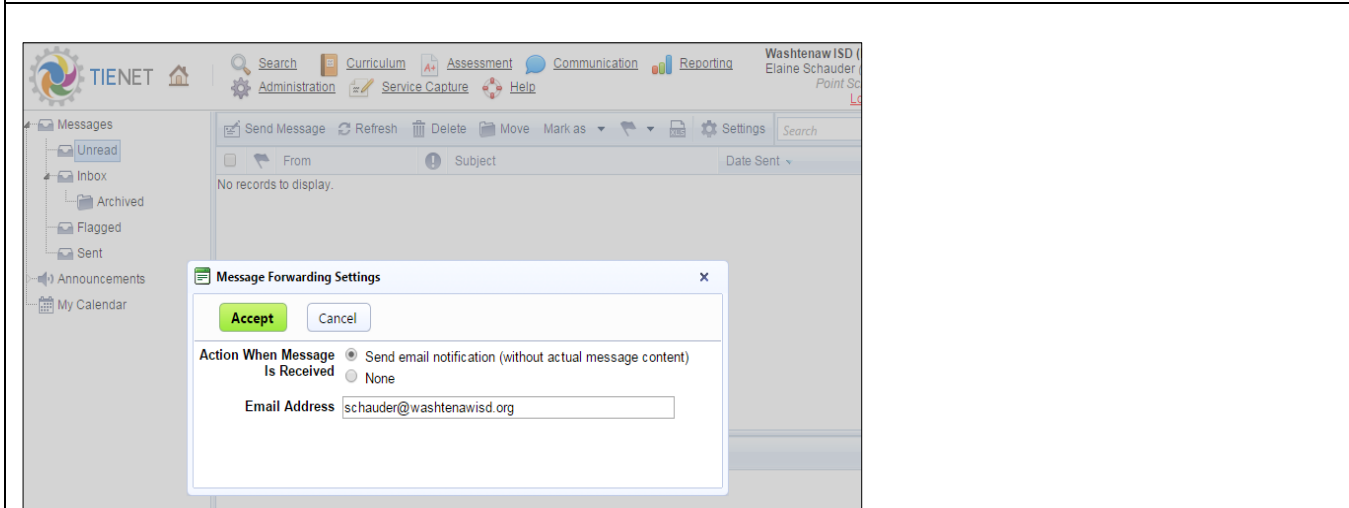

Regardless of forwarding, incoming TIENET messages are always accessible from your TIENET home page.

Select Communication/Messages from your home page.

Select Settings

Select Send email notification (without actual message content)  
Enter Email Address. Click Accept.
